

A better first response.

Helpful answers when customers need them.

Hektor's people when it matters.

01 Ask

A customer opens the chat.

02 Answer

Hektor Agent uses approved information.

03 Connect

Your team handles the next step.

Questions do not follow office hours.

Your answers already exist.

Customers still have to find them.

Hektor publishes FAQs and offers a contact form, email and phone support. A conversation could help customers find the right answer on the same page.

The opportunity: make the first step easier, including outside staffed hours.

40 hours / week

Published staffed opening hours

40 staffed

128 outside those hours

Mon-Fri, 08:00-17:00, minus lunch 12:00-13:00. Opening hours do not measure customer demand or lost sales.

One conversation. A useful next step.

Add Hektor Agent to the contact page.

01

Answer a question

Explain services and common support topics using material Hektor has approved.

"How does WiFi calling work?"

02

Guide an enquiry

Understand what the customer needs and prepare a useful enquiry for sales.

"Which plan might suit me?"

03

Bring in a person

Pass a request to the right team, with a summary and the relevant conversation.

"I need help with a charge."

Helpful first. Human when needed.

• Hektor Agent

Illustrative conversation

Hur fungerar WiFi-samtal?

Du ringer via WiFi i stället för mobilnätet. Din telefon behöver stödja tjänsten.

[Källa: Hektors vanliga frågor](#)

Jag vill prata med någon.

Jag hjälper dig vidare. När supporten är stängd kan du lämna en kontaktförfrågan.

1 An answer with a source

The customer can check the information.

2 A clear way to a person

Explain availability and the next step.

3 Context travels with the case

The team sees what has already been asked.

Start with what Hektor already publishes.

Someone owns the answers. A named Hektor contact approves material, resolves conflicts and keeps it current.

Set clear limits before the first chat.

IN THE INITIAL PILOT

Explain and guide

- Answer approved general questions
- Point to the relevant Hektor page
- Prepare a support or sales request
- Let the customer ask for a person

RESERVED FOR YOUR TEAM

Decide and commit

- Negotiate prices or payment terms
- Approve refunds or disputed charges
- Cancel or change an account
- Resolve uncertain or sensitive cases

Make the handover worth receiving.

A colleague should start with context.

A useful case includes the question, a short summary, what was tried and the information needed for follow-up.

Agree who receives cases, where they arrive and what response the customer can expect.

EXAMPLE / SUPPORT HANDOVER

Reason	Customer requests a person
Question	Help setting up WiFi calling
Already covered	General explanation and FAQ link
Next step	Support follows up through the agreed channel

Only the details needed to handle the request.

Customer records come later.

Prove general answers first. Scope personal support separately.

01

Confirm identity

Use an approved verification method. A typed customer number alone is not verification.

02

Limit access

Show only the relevant customer's information. Begin with read-only access.

03

Agree data handling

Decide what is stored, who can see it, and when it is removed.

A separate go / no-go decision.

Customer-system feasibility and privacy requirements need review before this phase.

A small scope. A real test.

INITIAL SCOPE

One page.

One approved knowledge set.

One support handover.

Start on /kontakta-oss with common general questions.

Before customers use it

Test Swedish conversations

Common questions, unclear wording and refusals.

Check the whole experience

Mobile, keyboard access and readable responses.

Rehearse with your team

Review answers and confirm case delivery.

Measure usefulness, not just activity.

QUESTION	WHAT TO REVIEW
Did customers get help?	Resolved questions, customer feedback and repeat contacts
Were the answers reliable?	A reviewed sample checked against approved sources
Did handovers work?	Case delivery, useful context and follow-up time
Was it worth running?	Service costs, review effort and staff time per resolved case
Agree a baseline and success criteria before launch. Use the results to decide whether to expand.	

Clear responsibilities from day one.

HEKTOR

Own the service decisions.

Nominate a service owner.

Approve answers and boundaries.

Define support follow-up.

Approve suppliers and data handling.

IMPLEMENTATION PARTNER

Build and test the experience.

Confirm the website integration.

Configure the approved sources.

Test responses and handovers.

Report results and operating costs.

Transparent supplier costs.

Proposed model: Hektor holds the model-provider account and pays usage directly, without markup.

Shall we scope the pilot?

Bring the right people and the common questions.
Leave with a scope, a cost and a way to judge success.

01

Name an owner

One Hektor contact for service and support decisions.

02

Share the questions

Approved material and anonymised examples of common enquiries.

03

Agree the pilot

Confirm feasibility, scope, price and success criteria.
